### **Why I chose Chartist.js**

I found Chartist.js from a tweet in my Twitter feed (though can't recall from whom the tweet originated). I followed the link and explored what it had to offer. I was impressed with the use of SVG and animations for chart-based data visualizations, so I decided that this library looked like a good topic to explore. I was also thinking ahead for The Project assignment, where there's a requirement for an animated bar chart (or some other form of interactive data visualization).

### **My Feelings on The Presentation**

I'm hopeful that my presentation will be helpful to other people looking into Chartist.js. Creating the actual presentation was a familiar feeling, since I've made many presentations in the last year at Full Sail. Exploring Chartist.js was exciting at (at times) frustrating. It was awesome to finally figure out how everything worked. It was frustrating to get stuck on something that the documentation didn't explain clearly enough for me. Still, in the end, I know that it only increased my JavaScript skills and expanded my front-end knowledge.
